DAV College | High School Degree

Jawalakhel, Lalitpur | 2074- 2076

- Science Stream
- Courses: Physics, Mathematics
- Participated in Science Fairs and Events

Projects

Dessert e-commerce (<https://github.com/anusha5539/dessertecommerce>)

- Developed a comprehensive Web Application to create a robust platform for buying and selling desserts online. Leveraging Laravel's powerful framework, it incorporates user authentication and authorization through Jetstream, enabling secure user management.
- MySQL serves as the database for storing essential information like product details, user profiles, and cart and order history and so on.

Contact app (<https://github.com/anusha5539/contact-app>)

- Developed a contact app which facilitates the creation, retrieval, updating, and deletion of contacts through a user-friendly interface.
- This application serves as a versatile tool for individuals and businesses alike to organize and maintain their contact lists effectively.

Movie Recommendation system (<https://github.com/anusha5539/movie>)

- Developed a movie recommendation system which offers users personalized movie suggestions based on their preferences.
- Integrated a FastAPI recommendation engine with a Laravel application, utilizing Laravel's HTTP client to fetch personalized movie recommendations based on user preferences. Successfully processed API responses, dynamically presenting recommended movies to users, showcasing adeptness in backend development, API integration, and enhancing user experience.
